

Jonathan DiCecco

diceccoj@mcmaster.ca | 416-268-4810 | Mississauga, ON (L5N 7L5) | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

A passion-driven, detail-oriented computer science student with a background in data analytics and software development. Possesses an excellent set of communication and problem-solving skills and ability to work incredibly well in a team environment. Known for being creative and challenging deadlines, as well as being able to learn new concepts and tools quickly and effectively. Successfully applied knowledge of Python, C# and Javascript to excel in artificial intelligence, machine learning, and web development to create responsive, creative, and powerful applications.

Education

McMaster University - BAsc. Honours Computer Science Co-Op | 4th Year | Python, C, C++, Haskell, Java, SQL
September 2022 – June 2027

Relevant Courses: Application of Machine Learning, Human-Computer Interfaces, Databases

Extracurricular: Computer Science Society (Events Logistics Lead, Mentorship), Solar Car (Frontend Development)

Technical Skills

Languages/Frameworks: Python, SQL, Typescript, Javascript, C#, React, C++, VBA, Excel

Work Experience: Organization, Time-Management, Problem-Solving, Collaboration/Teamwork

Work Experience

Data Support Co-Op | VBA, Python, NumPy, Pandas, Power Query, Excel, Version Control, TortoiseSVN

ATS Life Sciences | Cambridge, ON (Hybrid) | January 2025 - August 2025

- Built responsive tools and created unique solutions for other employees and customers through the use of VBA and Python
- Learned and adapted to VBA within the first week using previous experience and skills developed in my academic program
- Created a graphical data mining tool using Python/Pandas to automate data cleaning and report building, saving dozens of hours in time
- Reduced manual reporting time by 40% by automating data processing pipeline using Power Query and Pandas
- Collaborated with other software developers to increase automation speed and performance gains

IT Cherwell Admin | Excel, Cherwell Software, Power BI

CAA Insurance | Vaughan, ON (Remote) | May 2024 - August 2024

- Automated data retrieval from company database using SQL and Cherwell software, boosting efficiency by 30%.
- Optimized company database accuracy by 20% by updating and/or cleaning thousands of servers' information.
- Worked with team in designing an employee onboarding form for the company, troubleshooting dozens of errors, assisted in finding fixes, and ensured upmost quality before production
- Collaborated with other team members to fill in missing information for thousands of unknown servers, increasing the scope of the company's database

Jr. Data Analyst | Python, Pandas, Excel, Power BI, Power Automate

Clearbox Retail | Mississauga, ON (Remote) | May 2023 - August 2023

- Facilitated the teams ability to fully leverage masses of POS data provided by Sobey's
- Identified and capitalized on \$15M in actionable revenue growth drivers, utilizing Sobey's IRI data
- Responsible for the evaluation for \$400M of sales data to support second-largest customer, identifying supply chain and store-level opportunities
- Spearheaded the integration of error-handling mechanisms to ensure the resolution of data issues
- Converted files to Excel via Python scripting while ensuring high levels of quality assurance
- Developed data visualization dashboards in Power BI

Hackathons and Projects

Geckode Block Coding Website | React, Next.js, Typescript, Python, Django

- Collaborated with team to create a dynamic, effective and educational blockcoding application for children
- Created a frontend with React and Next.js which communicates with a Django server using a REST API
- Used Git to manage version control, log issues and communicate effectively as a team
- Implemented Javascript interpreter to translate coding blocks into functioning game code for user

Google Developer Students Club Hackathon – Mental Health AI (Finalist) | Python, Firebase, OpenAI, UI/UX

- Worked alongside team to create a chatbot to assist individuals experiencing a mental health crisis
- Project placed as a finalist in the category, placing 2nd place overall
- Operated under extreme pressure and worked effectively with team to finish product in under 24 hours
- Created interface using Python and to configure OpenAI API to set appropriate restrictions

DeltaHacks 12 Hackathon – AI Exercise Game | Python, Godot, GDScript, UDP Connections, Google Mediapipe

- Created a fun, interactive and addicting exercise game within a strict 24h limit with team of 4
- Used Python with Google's Mediapipe API to use an LLM to analyze body movements on camera and detect exercises
- Set up UDP server to transfer data between two scripting languages and ensure fast, accurate transfer of data
- Used exercises as signals to control various aspects of the game with high levels of precision and accuracy
